Program Description

The Department of Correction (DOC) Recovery Pathfinder Program assists participants by linking them to a long-term integrated support network pertaining to recovery and community integration while providing support and guidance for section 35 civilly committed individuals. Program participants will begin their path to recovery with a Recovery Pathfinder while they are at the treatment facility and continue services post-release in the community. The scheduled length of the program is up to 90-days within the treatment facility and up to 6-months post-release. While at the treatment facility, program participants are assigned to a Recovery Pathfinder that works within their release county. The number of pathfinders assigned to each county is based on the 2017 monthly releases from the Massachusetts Alcohol and Substance Abuse Center to the community.

Mission Statement

The mission of the Recovery Pathfinder Program is to provide support and advocacy for section 35 civilly committed males as they begin the process of recovery, health and wellness in the community. This is achieved by linking program participants to services that help them achieve their goals for recovery post-release; by introducing an integrated support network such as referrals to transitional support services such as treatment for substance use disorders, mental health, medical treatment, housing, and financial assistance that support their goals for recovery post-release.
